My portfolio is mainly based in the graphic design industry. I love working around people's option, illustration of imagery and text. The meaning of art and design are defined in many different areas. It is earnest, meaningful, and a form of visual languages. I believe that everything in the world is affected by art itself. The ability to design billboards, logos, banners, etc for my client which basically allow me to be their visual communicator. Being able to express my artistic ideas simply gives the sense of interest and wonder to the world. Thus, I find great freedom in the ability to choose any media, format, and concept that I believe can best present my idea or information. Throughout my experience towards making art I have come to realized that art is about individualism, hence, developing a unique style would be my essence into becoming an artist and a designer.
